At least 5 GCSEs at level 4 or above, including English and Maths. A strong mathematical background is not strictly required, but many of the conceptual skills to understand and interpret data and analyse relationships are key skills. First and foremost, must be a keen interest in the news and current affairs. An ability to argue a case, compare theory and reality and observe the differences are very important.

Subject Requirements

Course Structure

Introduction to markets and market failure

The UK economy performance and policies

Business behaviour & the labour market

The global perspective
